Aladdin, a holistic view: BlackRock's end-to-end platform that unifies data, analytics and workflow across public and private markets

Layer	Components	What it delivers
Users	Asset managers and owners · insurers · banks · wealth managers · corporates	Institutional, wholesale and professional investors only. Over 300 clients and about 30,000 users (2022).
Core workflow	Portfolio, trading, risk, operations, compliance, reporting	Front-to-back workflow on one platform: multi-asset risk and scenarios, trading, IBOR accounting, compliance and reporting.
Specialised modules	Wealth · Climate · eFront · Preqin · Cachematrix · eFront Provider	Extends the core to advisers, climate risk, private markets lifecycle and data, cash management and servicer links.
Data and cloud	Common data language · Data Cloud and Studio (Snowflake) · Azure	Real-time, quality-controlled data feeds every app; clients add own data and build on it. On Azure since 2020.
AI layer	Aladdin Copilot · eFront Copilot · Wealth Auto Commentary	Answers questions inside platform limits and gives no investment advice. Morgan Stanley first Auto Commentary client (2025).

Takeaway: Five layers share one data model, so risk, trading and reporting stay consistent. The next slides walk through each layer, starting with who uses it.

Users: over 300 institutions, from pension funds and insurers to wealth managers and corporates, run on Aladdin

What it does

Asset managers and owners

Pension funds, insurers and official institutions use Aladdin as their investment operating system. Reported users include Vanguard, State Street Global Advisors, CalPERS and Japan's GPIF.

Insurers and banks

Half of the ten largest insurers by assets use Aladdin, per the FT. Banks and asset servicers use it for risk and middle-office work, often alongside HSBC or BNY services.

Wealth managers and advisers

Aladdin Wealth gives advisers portfolio risk, compliance and product suitability tools. Morgan Stanley, UBS and Brinker Capital are among the adopters.

Corporates and advisers

Corporate treasuries use Cachematrix for cash. Law firms and consultants also subscribe, across North America, South America, Europe, the Middle East, Asia, Africa and Australia.

Key facts

300+
Clients on the platform (2022)

~30,000
Users across the client base (2022)

$17T+
Assets on the platform (2022)

Takeaway: such varied clients share one language, which explains Aladdin's pull and feeds the concentration debate. Next: the core workflow they all rely on.

Source: BlackRock 10-K FY2025; FT via Finadium; Bloomberg (2018); Aladdin job spec (2022); Aladdin newsroom

Core workflow: portfolio management, trading, risk, operations, compliance and reporting run on one shared data set

What it does

Portfolio management and trading

Portfolio construction, analysis and monitoring across asset classes, with order and execution workflows working from the same real-time position data.

Risk analytics

Multi-asset risk models, exposure and look-through analysis, risk budgeting, stress tests and scenario creation, such as a pandemic or a Lehman-type shock.

Operations, accounting and compliance

An investment book of record updated in real time for downstream apps, plus rules-based checks that help clients stay within an evolving regulatory framework.

Reporting and performance

Performance attribution, benchmarking and automated reports, including money-weighted returns that now cover private market transactions.

Key facts

1988

Platform conceived in BlackRock's first year as an in-house risk and trading system

3

WatersTechnology buy-side awards in 2023, including best IBOR platform

Green Package

Internal risk reports that became a client service

Takeaway: one data set from decision to reporting is the heart of the value. Next: how acquisitions and new modules extended it.

Source: WatersTechnology BST Awards 2023; CIPFA Aladdin overview (2016); BlackRock history; Wikipedia

Specialised modules: Wealth, Climate, eFront, Preqin, Cachematrix and Provider extend the core into new use cases

What it does	Key facts
Aladdin Wealth Portfolio risk, compliance and cross-border product suitability analysis for advisers. Auto Commentary (October 2025) writes personalised portfolio narratives; Morgan Stanley was first.	$1.3B Price paid for eFront in 2019
Aladdin Climate Launched in 2020 to measure physical and transition climate risk across public asset classes. It won best buy-side risk management initiative at the 2021 BST Awards.	$3.2B Preqin deal, about $240M recurring revenue
eFront and Preqin eFront (2019) manages private markets from fundraising and fund administration to reporting for GPs and LPs. Preqin (2025) adds private markets data, benchmarks and research.	~$200B Client assets on Cachematrix at its 2017 announcement
Cachematrix and eFront Provider Cachematrix (2017) simplifies cash management for banks and corporate clients. eFront Provider gives asset servicers and managers a shared data language.	

Takeaway: each addition reads from and feeds the same data model. Next: the data layer that makes this possible.

Data and cloud: a common data language, Snowflake-powered Data Cloud, Studio and Azure let clients build on Aladdin

What it does

Common data language

Quality-controlled data updated in real time and shared by all downstream applications, so every business unit works from the same view of positions and risk.

Aladdin Data Cloud

Powered by Snowflake. Each client gets an independent, centrally managed data store pre-loaded with front-to-back Aladdin data, extended with proprietary and third-party data.

Aladdin Studio

BlackRock's developer platform, letting clients customise, create and collaborate on top of their own Aladdin instance, including dashboards and custom applications.

Microsoft Azure

Aladdin has been hosted on Azure since the April 2020 partnership with Microsoft, whose Azure OpenAI services also underpin the Copilot tools.

Key facts

2020
Azure hosting partnership announced

2021
Data Cloud rollout planned with Snowflake

DaaS
Managed data-as-a-service for clients

Takeaway: the data layer turns Aladdin from an analytics factory into an intelligence factory. Next: the AI built on top of it.

Source: Snowflake; Finadium; Private Banker International; Microsoft; Snowflake podcast (Nov 2025)

AI layer: Aladdin Copilot, eFront Copilot and Auto Commentary speed up answers within responsible-AI guardrails

What it does

eFront Copilot

Previewed in 2023 with 10 eFront clients, built on Azure OpenAI services to support private markets workflows.

Aladdin Copilot

Strengthens connections across the platform and surfaces answers instantly. Accessed securely, with data privacy and risk controls in place.

Guardrails

Built on responsible-AI principles. It gives no investment advice and does not answer questions outside the platform boundaries.

Preqin AI and Auto Commentary

AI-enhanced manager shortlisting and fund profiling in eFront (2026), AI-assisted private credit research (May 2026) and adviser commentary in Aladdin Wealth.

Key facts

2018

BlackRock AI Labs launched

100+

AI experts across departments (2023)

2023

eFront Copilot launched

Takeaway: AI makes the platform's data easier to use but stays within Aladdin's boundaries and gives no investment advice. Next: what it all adds up to.

Assessment: a durable lead, with concentration risk, rivals and easing ACV growth as the watch-points

Scale and momentum

$2.0B	2025 technology revenue, +24% YoY; Aladdin is the majority
+31%	2025 ACV growth incl. Preqin; +16% organic
+14%	Q3 2026 tech revenue growth; ACV +12% YoY
300+	Clients; about 30,000 users, $17T+ assets (2022)

Sources of advantage

Integrated platform
One data model links trading, risk, operations and reporting

Public and private reach
eFront, Preqin, GIP and HPS extend coverage to private assets

Data and AI layer
Snowflake data cloud, Azure hosting and Copilot assistants

User and provider
BlackRock both uses and sells Aladdin, which guides development

Watch-points

Concentration
Critics cite groupthink; FCA said failure could harm markets

Competition
SimCorp, Charles River and Bloomberg compete on key fronts

Vendor dependency
Some clients avoid funding a rival asset manager

Growth normalising
Q3 2026 ACV +12% sits at low end of the low-to-mid-teens goal

Implication: Aladdin is positioned as the consolidating platform for whole-portfolio investing, with technology and private markets targeted at 30%+ of BlackRock revenue by 2030.

Source: BlackRock 10-K FY2025; Q2 and Q3 2026 earnings releases; Bloomberg (2018); FT via Finadium; BlackRock Aladdin job spec (2022)

Key takeaways: Aladdin is the connective tissue of BlackRock's technology business, and the four points below are what to remember

1

What it is

BlackRock's end-to-end investment platform: portfolio management, trading, risk, operations, compliance and reporting on one shared data model.

2

Who uses it

Over 300 institutions and about 30,000 users (2022), from pension funds and insurers to wealth managers and corporates.

3

How it has grown

Modules and acquisitions (Wealth, Climate, eFront, Preqin, Cachematrix), a Snowflake and Azure data layer, and Copilot AI tools.

4

Why it matters

Technology revenue reached $2.0B in 2025, up 24%. Concentration, competition and easing ACV growth are the watch-points.

Bottom line: as clients consolidate onto fewer platforms, the question is how far Aladdin's integrated model keeps winning across public and private markets.
